

# TECHPLAN RENEWABLE ENERGY SOLUTIONS - CAPABILITY STATEMENT

## Company Overview

Techplan is experienced in delivering integrated solar, wind and power storage solutions, across the Utility Scale Industry both in Australia and Asia.

We have an experienced team of consultants and industry contacts, and a genuine strength in technology, research and development, manufacturing, Project Logistics, Implementation and Delivery.

Strong relationships with leading EPC and OEM partners and the ability to customize our own project teams to match our customers requirements ensuring that they can be confident that they are receiving the best practical solutions suited to their Projects needs and requirements.

When you choose Techplan and its partners, you are selecting a trusted brand and a company with a proven commitment to delivering safe, dependable, advanced technologically, and outcomes and the best value products, services, and solutions.

Techplan is primarily focused on supporting the Australasian growing renewables energy sector and playing a part in its development, engineering, design, construction and ongoing operations and maintenance support when required. We have the scale and experience to provide solutions to your largest, most complex solar and wind requirements.

We are equipment agnostic and can collaborate with your preferred suppliers' or custom design a solution to your specific requirements. We believe in delivering robust solutions that are packaged for quick deployment to increase efficiency and reduce on site labour during the install phase.

## Recent Experiences

Techplan and its partners have experience in Solar Farms in remote areas of Australia like your proposed Northern Territory site that are subject to Sandstorms, Salt mist, and High Seasonal Temperature Differences as a key supply partner.

## Solar Farm and Renewables Integrated Technological Solutions

Techplan is focused on engineering, supplying, and supporting utilities or industrial scale renewables projects including both photovoltaic or thermal solar, wind and power storage including operations and maintenance.

### Key elements of Techplan' s offering:

- An experienced Team
- Relative Australian and Asian experience and know how
- Relative Australian and Asian Contacts
- Engineering skills available
- EPC experience in your specific field to match your requirements
- Management of Installation, testing, and commissioning
